In order to actively take part in the preservation of natural resources, Clairefontaine has been innovating for many years by putting into application environmentally respectful industrial processes.

Water preservation

The Etival site has a biological water purification plant which has received a Water Trophy and a Ministry of the Environment prize. This plant eliminates virtually all matter present in the water, which means that anglers can fish in the river in the near vicinity of the Papeteries de Clairefontaine mill.

Effluent represents a little less than 1 % of the site's production. Clairefontaine was the first paper mill to install a composting plant to transform this effluent into normalized compost (NF U44-95 norm) which is recovered in agriculture.

Clean energy

Greenhouse effect gases are incriminated in global warming. Paper production, especially the drying section, needs important quantities of energy (50 tonnes of steam per hour and 12 000 KW). Clairefontaine found the solution by equipping its power station with a cogeneration unit and a gas turbine with a recuperation boiler plus two steam turbines and a hydroelectric turbine. This mechanism allows the mill to be more than 80% self sufficient in electricity, whilst at the same time eliminating sulphur emissions into the atmosphere. Moreover the carbon dioxide emitted is recovered in order to produce the mineral filler (precipitated calcium carbonate) which gives its qualities of whiteness and resistance to the paper

Regenerated forests

The paper pulp used by Clairefontaine comes from forests certified for their environmental management. The certification systems take into account the following points: the total wooded surface (the forest being a carbon "trap"), the forest's age, respect of flora and fauna biodiversity, the interests of local populations as well as social and leisure aspects. Amongst the main environmental forestry certification systems, one finds PEFC (Programme for the Endorsement of Forest Certification) and FSC® (Forest Stewardship Council®). Contrary to generally accepted ideas, the younger a tree, the more active it is; which means that they eliminate more carbon dioxide.

Clairefontaine is very attached to French forests, and actively takes part in their development and renewal. The group itself owns and upkeepes several hundreds of hectares of pine and spruce forests in the Vosges area. On this wooded surface Clairefontaine tests the most ecological management methods possible.

A recycling pioneer

Situated near to Reims, Everbal, Clairefontaine's subsidiary, has been dedicated to recycled paper for over 30 years. It is turned towards the integral re-use of salvaged paper. Without de-inking, without optical brighteners nor chlorine treatment; the production process however allows record output. With only 106 kilos of salvaged paper, 100 kilos of good paper are obtained. And as a result, there is little waste to be disposed of, whereas other production processes using de-inking generate a considerable loss of fibres and filler reaching 20 to 30 % waste to be disposed of. The Everbal site is ISO 9001 and ISO 14001 certified and has obtained the Blue Angel label, as well as the approval of the Water Agency guaranteeing environmental respect and well-managed use of water.

ISO Certifications:

The ISO 14001 norm covers environmental management i.e. the way the company organizes and manages environmental impacts linked to its activities. It is based on the principle of continuous improvement of environmental performance.

ISO 14001 certification is granted on the basis of regular audits made by an independent organism. It is internationally recognized.

ISO 50001 is the international standard that defines the implementation requirements for energy management systems. ISO 50001 provides organizations with management strategies to improve energy performance and reduce costs.

The ISO 9001 standard concerns quality management, meaning the organization that the company has implemented to ensure production meets customer requirements, as well as legal and regulatory standards aimed at customer satisfaction.

Environmental reference labels

La marque de la gestion forestière responsable

FSC®

FSC® means Forest Stewardship Council®. This independent non-profit-making international organization grants certifications to forests which are managed on a long term basis, and to businesses in the timber industry who can guarantee that the wood and fibres they use come from forests with a long term management from an environmental, social and economic point of view. Find out more about our FSC®-certified products in this catalogue.

Promouvoir la gestion durable de la forêt

PEFC

This independent NGO (Programme for the Endorsement of Forest Certification) offers certification to voluntary foresters who respect its recommendations concerning forest management.

EU Ecolabel - FR/011/006

Ecolabel

The European ecological label is granted to consumer goods and services which respect ecological criteria established by the European Commission for their category. Its aim is to promote products and services respecting the environment, and to better inform consumers.

Please collect used paper for recycling

www.blauer-engel.de/uz14a

Ange Bleu

This label is defined by the German federal environmental agency. The Blue Angel label is granted to products with a low environmental impact. Composition, production and conversion of paper is controlled in a detailed manner. Only papers made from 100 % old paper are certified.

ISO 9706

Permanent papers

All our white copier papers are guaranteed as being permanent papers. They are in conformity with strict demands concerning the resistance to ageing according to the ISO 9706 norm or to the DIN 6837 norm for recycled papers.

They are therefore suitable for long term archiving (over a 100 years) of official written documents.

Clairalfa

ENVELOPPES & POCKETS

Expert solutions for efficient correspondence

- ✓ Clairefontaine paper:
 - Bulky paper for easy processing,
 - Optimised surface finish, essential factor for good colour reproduction,
 - Very high whiteness 171CIE, possible harmonisation with letters made on Clairalfa paper.

- ✓ More sustainable envelopes than ever:
 - A 35 gsm crystal paper window: 85% transparency, 100% biodegradable
 - Envelopes printed with water-based inks

- ✓ A optimised manufacturing process, creating added value:
 - A reinforced closure, for both adhesive and gummed envelopes,
 - Good flatness of the envelope pile, essential for reliable machine processing,
 - Envelopes delivered in hinged boxes, practical to use, and reusable for the printer.

Expert solutions for efficient correspondence

- ✓ Clairefontaine paper:
 - Bulky paper for easy processing,
 - Optimised surface finish, essential factor for good colour reproduction,
 - Very high whiteness 171CIE, possible harmonisation with letters made on Clairalfa paper.
- ✓ More sustainable envelopes than ever:
 - A 35 gsm crystal paper window: 85% transparency, 100% biodegradable
 - Envelopes printed with water-based inks
- ✓ A optimised manufacturing process, creating added value:
 - A reinforced closure, for both adhesive and gummed envelopes,
 - Good flatness of the envelope pile, essential for reliable machine processing,
 - Envelopes delivered in hinged boxes, practical to use, and reusable for the printer.

NEON

Trophée Neon, a fluorescent yellow paper, is even more lightfast than ever. Thanks to this carefully developed formulation, the Neon rolls will retain their freshness and radiance over the weeks, to help you make a lasting impression, communicate your message effectively or organise a colourful display.
