

Product composition

Clairefontaine papers are made from virgin fibres, recycled fibres or a mixture of both. Other ingredients mainly comprise calcium carbonate and starch. Additives are also used to achieve colouration and optimise paper printing and writing properties.

General warnings and specific instructions

Under normal conditions of use, our products do not pose a threat to user health and safety.

However, be sure to observe the following precautions:

- do not ingest;
- as sheet corners are pointed, avoid all contact with the eyes;
- as sheet thickness may be slim, avoiding any sliding contact along the edge to limit the risk of cuts;
- as paper is combustible, avoid starting a fire by avoiding any contact with sources of heat and ignition (hot surface, spark, open flame, lit cigarette, etc.).

In the event of a fire, use a suitable fire extinguisher.

Except for specific ranges, our papers are not suitable for food contact.

Information on hazardous substances

The additives used in our papers comply with the European REACH Regulation (1907/2006).

Age limit

36 months without adult supervision.
